The team owns the code. No team member leaves the triangle except to rotate compressors or to protect his or her safety.

**Compressor**
- Assesses the patient
- Performs compressions according to local protocols
- Rotates every 2 minutes or earlier if fatigued

**Monitor/Defibrillator/CPR Coach**
- Brings and operates the AED/monitor/defibrillator and acts as the CPR Coach if designated
- If a monitor is present, places it in position where it can be seen by the Team Leader (and most of the team)

**Airway**
- Opens the airway
- Provides bag-mask ventilation
- Inserts airway adjuncts as appropriate†

**Leader**
- Every resuscitation team must have a defined leader
- Assigns roles to team members
- Makes treatment decisions†
- Provides feedback to the rest of the team as needed
- Assumes responsibility for roles not defined

**IV/IO/Medications†**
- An ALS provider role
- Initiates IV/IO access
- Administer medications

**Timer/Recorder**
- Records the time of interventions and medications (and announces when these are next due)
- Records the frequency and duration of interruptions in compressions
- Communicates these to the Team Leader (and the rest of the team)

*This is a suggested team formation. Roles may be adapted to local protocol.
†Roles and tasks are performed by advanced providers.
